

# PRIVATE PILOT REQUIREMENTS

## Part 141

The following is a list of the **MINIMUM** times required by the FAA under Part 141 for the issuance of a Private Pilot License:

**35 Hours Total Flight Time, and 35 Hours of Ground Training (fulfilled by our online course)**

**20 Hours with an Instructor, including:**

- 3 hours cross country
- 3 hours night flying, including:
  - ~1 cross-country over 100 miles total distance.
  - ~10 take offs and landings.
- 3 hours flight solely by reference to instruments while wearing a view-limiting device.
- 3 hours training in preparation for the practical test within 60 days preceding the test.

**5 Hours Solo, including:**

- At least one cross-country over 100 nautical miles total distance with at least 3 landing points, and one segment at least 50nm straight-line distance.
- 3 take offs and landings at an airport with an operating control tower.

**The remaining 10 hours will be based on the student's needs**

Please note the hours listed are the minimum times allowed by the FAA - and most students take more than the minimum hours required. The national average is around 60 hrs of training. Using the revolutionary **Cessna Web Based Training Program**, we offer an efficient training program, which helps our students stay much closer to the minimum time requirements.

The student will take his/her practical test with a designated FAA examiner when he/she can consistently meet the Private Pilot Practical Test Standards for each Area of Operation and Task.
