INSTRUMENT PILOT REQUIREMENTS

Part 141 Course

1. Hold at least a private pilot rating for the aircraft category of the instrument rating sought.
2. 30 hours of ground training (fulfilled by our CD kit)
3. 35 hours additional flight training with an instrument instructor, including:
 - a. A long IFR cross-country of at least 250 miles total distance including:
 - i. One segment with a straight-line distance of 100 miles between airports
 - ii. At least one approach at each airport for a total of 3 different kinds of approaches.
 - b. Up to 10 hours of flight training may be completed in our PCATD. (Sim)

Please note the hours listed are the minimum times allowed by the FAA - and most students take more than the minimum hours required. Using the revolutionary **Cessna Web Based Training Program**, we offer an efficient training program, which helps our students stay much closer to the minimum time requirements.

The student will take his/her practical test with a designated FAA examiner when he/she can consistently meet the Instrument Pilot Practical Test Standards for each Area of Operation and Task.
